## File Organization • HOSPITAL SYSTEM

01

### **About the project**

### What are we working on?

Our DataSet Is about PATIENT.

#### **Functions**

In Our Project we made clear Function for Text files.

#### **Bonus**

We used Variable length as to be records more flexiable with us.

#### **Functions**

These Function For Both Data: Manager & Employee.

- ADD.
- DISPLAY ALL DATA.
- SEARCH BY ID.
- Search by name.
- DELETE RECORDS.
- UPDATE.
- Clear.
- Exit

### Variable Length Record

Based on the length of the record after update:

If less than or equal the old one→add in same place (preserve the old size)

If larger than the old one→perform update as: deletion followed by addition.

### Fundamental File Structure Concepts:

We use some operations like: Read, Write, Tellg, TellP, Seekg, Seekp, OffSet And So on.....For Specific Process.

## MORE DETAILS

 $\times$   $\times$   $\times$   $\times$   $\times$ 

# In Add Function We must check If There Deleted Record Before

If RETURN yes will ADD in The Record Deleted if No Will ADD at The End.

# In Display Function We Display All Records Of Data We Saved.

We Check First if They Are Data In File or not If NOT will print" not found."

### 3.Search By ID<sup>○</sup>

# In Search Function We Display Data of one record Who has This ID.

We Check First if This ID In Our Data or not If NOT will print>>>"NOT FOUND".

### 4.Search By Name

# FIRST USE COMPARE FUN IF RETURN 0 >> NOT FOUND.

### 4.DELETE RECORD

### In Delete Function we can Delete Record Or More by Enter **ID**(delete from prim key&sec index).

We Check First if This ID In Our Data or not If NOT will print>>>"not found".

In Update Function It just **Call Delete Function To Check Then Call** ADD fun.
